watch lecture

→ ESA (contd.)

- word sense disambiguation → eg. of bank,
looking at context, which sense is
correct. Or a classification problem for
the synsets.

- introducing non-orthogonality → text,
category trees, hyperhub.

- Introspective Methods

Latent Semantic
Analysis

(to solve the
circularity problem)

→ clusters as concepts

→ expectation maximization (Prob.

→ use ideas from ^{view} of LSA)

if you
don't have
the ext. knowledge

some other place (eg. Page Rank algo.)

$$P(d|q) \propto P(q|d) \cdot P(d)$$

likelihood prior

using the page
rank which is
independent of query.

Page is impt. if it is pointed to by
count of pages & important of page.

but to find this
we again need. →

Circularity Problem

AMS → AAAI (AI Magazine) → Archives
